

introduces
■■■■■

NAMCI is proud to introduce a new electronic tool that screens for a number of mental health conditions such as depression, anxiety, opioid risk, PTSD, ADHD, bi-polar disorder, alcohol dependence, perinatal depression, and psychosomatic disorders. On-site training is complementary. This is a great opportunity to add revenue while improving standards of care.

- **Quality of Care:** Quickly screens for early detection of mental health illness.
- **Decrease Risk:** Creates documentation of mental health testing to protect your practice.
- **Generate Revenue:** Tests are typically covered by group health, workers' compensation, Medicare and Medicaid resulting in additional revenue for your practice each month.

1 Assess

Establish a baseline for all patients through annual screening and subsequent testing as medically necessary.

2 Administer

Select the appropriate assessment and hand tablet to patient. Patient can complete test in approximately 5-7 minutes.

3 View Results Immediately

A secure PIN allows you to print and/or download EMR-ready PDFs.

4 Track Progress

Monitor patient progress during treatment by running tests periodically.
